Engineering Hiring Team

To the attention of the Technical Talent Acquisition Team

Software Engineering & Technology Department

Lyon Metropolitan Area / France / Remote

Lyon, France

> **Subject:** Application for a Software Engineering Internship (4 to 6 months) — Pathway to Master 2 Apprenticeship

Dear Hiring Manager, Dear Engineering Team,

Currently enrolled in the **Master of Science (MSc) in Computer Science & Network Systems Security at SUPINFO Lyon (5-year engineering curriculum)** and holder of a **Bachelor of Science in Software Engineering (Honors / Mention Bien)** from IAI-TOGO, I am writing to submit my application for a **Software Engineering Internship (4 to 6 months)** within your engineering team. Driven by software craftsmanship, resilient architectural design, and modern dev practices, I am eager to contribute directly to your production services and delivery cycles.

As an international graduate student in my first year in France, this accredited **4 to 6-month internship** provides the ideal framework for an immediate collaboration, conceived as an effective **springboard toward a long-term Master 2 work-study apprenticeship**. This offers your team a concrete advantage: evaluating my engineering autonomy, technical velocity, and team integration on live production projects before transitioning smoothly into my final Master 2 year, where I will already be fully familiarized with your codebase, workflows, and business logic.

> **Core Technical Proficiencies:** Java, Python, C++, Flutter/Dart, TypeScript, RESTful APIs, PostgreSQL, MySQL, Docker, Linux, CI/CD pipelines, and Network Systems Security (Linux hardening, TCP/IP, cryptographic protocols, OWASP audits).

Through my hands-on experiences at **Nataan Group (IT Services)** and **ATANYS**, I have contributed across the complete software delivery lifecycle: from requirements gathering and architectural design to implementation, automated testing, and cloud deployment. In particular, I engineered and published the mobile application **BoutiK** on the Apple App Store, handling complex offline-first data persistence, RESTful backend synchronizations, and Apple compliance workflows. In parallel, I developed automated intelligence scrapers (**AfroSpy**) capable of processing 10,000+ daily creatives with sub-200ms query performance, while executing rigorous QA test plans (over 100 test cases) ensuring high test coverage and zero regression.

Thriving in **Agile (Scrum)** environments, I place a high premium on clean code standards, peer reviews, systematic documentation, and robust automated testing. My dual focus on software engineering and network security enables me to write code that is not only scalable and performant, but also secure by design.

Proactive, adaptable, and motivated by complex technical problem-solving, I would be thrilled to bring my energy and commitment to your organization. I invite you to explore my open-source projects and deployed platforms on my interactive portfolio (**cv-rodrigue-hessou.vercel.app**).

I welcome the opportunity to discuss my background and how my technical skills align with your engineering roadmap during an interview. Thank you for your time and consideration.

Sincerely,

Rodrigue HESSOU

Software Engineer · MSc Candidate SUPINFO Lyon (Bac+5)
